Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc
                                                                                                                       This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                 this
NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              from
Jong
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NEIGHBORING SEQUENCE INFORMATION;
The clone sequenced to the left is RP11-450E9; the clone sequenced to the right is RP11-685N3. Actual start of this clone is at base position 1 of RP11-601N4; actual end is at base position 176555 of RP11-601N4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Date from AC062029 and AC060807 was used to finish this clone, AC023416. Polymorphisms have been identified between AC023416 and AC062029.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     f one male

/ Inote="Organ: Stemach; Vector: pCNS; Site 1: ECORI;
Site 2: NoII; The poly (A) + RNA was dephosphorylated with
batte_2: NoII; The poly (A) + RNA was dephosphorylated with
batte_1 alkaline phosphatase (EAP) and then decapped
with tabacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA liker including ECOR
I site by treatment of T4 RNA ligase and the first strand
cDNA was synthesized from oligo dT-selected mRNA by
priming with dT-tailed vector. The dT-tailed vector was
adjusted to have about 60nt. The cDNA vector was
circularized with E. coll NAI ligase after digestion of
ECORI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
obtained cDNA vectors were used for transformation of
competent cells E. coli Toplof' by electroporation method.
The cDNA libraries constructed by this method are
full-langth enriched cDNA library. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Dp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
modified polylinker; Site_1: EcoR I; Site_2: Not I;
UI_CFEEL is a normalized cDNA library containing the
following tissue(8): Normal lung from adult and from fetal
day 64, day 87, week 19 and week 42. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome.Research, 6:791-806, 1996. First strand cDNA
Synthesis was primed with an oligo-dr primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, dispessed with Not I, and cloned directionally
into pT73-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)B tail. The sequence tag for this library is
AAGTCCTTAC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                 The invention relates a humanised antibody that specifically binds an epitope contained within positions 13-28 of amyloid beta peptide, Abeta. The antibody is useful to inhibit and reduce the formation of amyloid plaques or the effects of toxic soluble Abeta species in humans their fragments are used for the manufacture of a medicant. This includes the prolonged expression of recombinant sequences of them in human tissues for the treatment of Clinical/pre-clinical Alzhaimer's disease, Down's syndrome or pre clinical/pre-clinical Alzhaimer's disease, Specifically, the antibody is used to sequester Abeta into plasma, brain or cerebrospinal fluid to prevent freverse accumulation of the Abeta sequence encodes the light chain of a humanised monoclonal antibody, Hu266, based on the mouse antibody 266.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   90 CCACTCTCCCTGCCTGTCACCCTTGGACAACCAGCCTCCATCTCTTGCAGATCTAGTCAG 149

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CITAAACACCATCCTGTTTGCTTCTTTCCTCAGGAACTGTGGCTGCACCATCTGTCTTCA 794
                                                                                                                                  The sequence is that of a plasmid expressing a structurally altered BR96 antibody, having the variable region of BR96 and a modified variable region. It can be used in the production of the structurally altered antibodies which are useful for the treatment of cancer and carcinomas in vivo, especially when conjugated to cytotoxic agents. Structurally altered BR96 Ab is used, especially conjugated to doxorubicin, to treat proliferative type diseases where a cell has a BR96 antigen on the cell surface. The chimeric and humanised BR96 Ab are also used in the methods to inhibit and prevent BR96-induced toxicity resulting from immunotherapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TICTAAACTCTGAGGGGGCTCGGATGACGTGGCCATTCTTTGCCTAAAGCATTGACTTTAC

Simian virus 40 WO9805787-Al. 12-FEB-1998.	FF 01-AUG-1997; 97MO-UBL3582. XX 02-AUG-1996; 96US-0023033. XX ERIM) BRISTOL-WYERS SQUIBB CO. XX			C The sequence is that of a plasmid expressing altered BR96 antibody, having the variable r CC a modified variable region. It can be used in CC structurally altered antibodies which are use CC treatment of cancer and carcinomas in vivo, CC conjugated to cytotoxic agents. Structurally CC used, especially conjugated to doxorubicin, CC true diseases where a cell has a RP96 antiform.		Query Match 82.9%; Score 1625.8; Best Local Similarity 91.6%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GGGGACATTGTGCTGACACACTCTCCAGATTCCCTGGCTGTAAGCTTACGAGAGAGGCC 128
                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents an expression vector for expressing the light chain of a chimeric anti-CD40 antibody designated chi220. The antibodies are effective in modulating humoral immune response against T cell dependent antigens, collagen induced arthitis and transplant induced rejection. They are also useful for their anti-inflammatory properties. The antibodies have wide therapeutic applications, including autoimmune and inflammatory diseases and transplantation. The antibody can be used in a pharmaceutical composition for treating a patient suffering from a T cell mediated disorder. They can also be used to treat autoimmune diseases, inflammatory diseases, and transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            129 ACTATTAGCTGCAAATCCAGTCAGAGTCTGCTCAACAGTAGAACCCGGAGAACTACTTG 188

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ACCATCAGCAGTCTGCAGGCTGAAGACGTGGCAGTTTATTACTGCAGCCAATCTTATA-- 366
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence shows the expression vector encoding the light chain of the chimerised anti-human monoclonal antibody (mAb), Chi220. Chi220 binds to human CD40 (or its active portion). It comprises murine variable and human kappa and gamma I constant regions. It binds to CD40 and effectively blocks humoral immune responses to T cell-dependent antigens in a dose dependant fashion. The antibodies of the invention are useful for modulating humoral immune responses against T cell-dependent antigens, collagen induced arthritis, and skin and kidney transplant rejection and are also useful for their anti-inflammatory properties. They are useful for treating autoimmune disease such as type I diabetes, pspriasis, multiple sclerosis, rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  462
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            522

isolated was ligated into NotI linearised pSAB132 which had been dephosphorylated by calf alkaline phosphatase. This generates the plasmid phymblo07. The dephosphorylated mixture was fractionated through low temperature melting agarose and used to transform E. C. 19421(Iq) to ampicillin resistance. The pMDR1007 insert comprises DNA encoding, in a 5' to 3' order, the immunoglobulin kappa chain cities a period, amino acid (AA) 1-AA112 of the humanised SAB light chain variable region (LV) followed by genomic DNA encoding AA108-C. C. The polypeptide encoded by pMDR1007 is an antibody region (LC). The polypeptide encoded by pMDR1007 is an antibody complex which was shown to bind to CD4 but did not block the binding of gp120 to CD4. CD4 is a cell surface glycoprotein of CD4+11 lymphocytes (helper/inducer cells). The homolog blocked HIV-induced syncytia formation. This homolog can be used in the detection, prophylaxis and treatment of diseases caused by infective agents whose

```
The sequence given is the insert of the vector pMDR1007. pMDR1006

(see AAQ309096) and pSAB132 (see AAQ30906) were used in the construction of this vector. Three fragments were ligated together to generate this vector. Three fragments were ligated together to generate pMDR1006; a 572 bp fragment of pMDR986 (see AAQ30918) and a 326 bp Ecory(YBg111 frame). The ligation mixture was used to transform E. Coli JA221(IQ) to ampticillin resistance. pMDR1006 was transform E. Coli JA221(IQ) to ampticillin resistance. pMDR1006 was cleaved with Norl and the 1693 bp fragment isolated was ligated into Norl linearised pSAB132 which had been dephosphorylated by calf alkaline phosphatese. This generates the plasmid pMDR100? The alkaline phosphatese. This generated through low temperature melting agarcase and used to transform E. Coli JA221(IQ) to ampticillin cresistance. The pMDR1007 insert comprises DNA encoding, in a 5′ to 3′ order, the immunoglobulin kappa chain signal peptide, amino acid (AA) cresistance. The pMDR1007 insert comprises DNA encoding in a 5′ to 3′ order, the immunoglobulin kappa chain signal peptide, amino acid (AA) cresistance. The pMDR1007 insert comprises DNA encoding in a 5′ to 3′ order, the immunoglobulin kappa chain signal peptide, amino acid (AA) cresistance. The pMDR1007 insert comprises DNA encoding in a 5′ to 3′ order, the binding of gg120 (CC). The polypeptide encoded by genomic DNA encoding AA108.AA214 of the human kappa light chain, ie the light chain constant region (CC). The polypeptide encoded by DNBR1007 is an antibody homolog which was shown to bind to could but did not block the binding of gg120 to CD4. CD4 is a cell surface placed in characterior of CD4+ lymphocytes (helper/induced syncytia formation. This homolog can be used in the detection, prophylaxis and treatment of diseases caused by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents the expression vector pA44611.

This vector was produced from the plasmid pA64270. pA64270

It is the expression vector for the light chain variable region (VL) of the antibody 128.1 which was obtained by PCR with leader/J region priming (see also AAQ43842). The vector also contains an ampicallin resistance gene, a gpt (mycophenolic acid resistance) selected marker, an immunoglobulin H ranscription of the CH gene is from the WH promoter of the chancer and an intron for V-constant region splicing.

Transcription of the CH gene is from the WH promoter of the murine 27.44 gene. The cloning of the 128.1 VL region was accomplished in two stages with the production of plasmid C pS44271 as an intermediate vector which lacks the promoter region. This plasmid was used in conjunction with pAH4602 in the production of the chimeric antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neuropharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological disorders eg. brain tumours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 14; Length 13999;
